Troubleshooting Issues in Management Reporting

PARTICIPANT GUIDE

October 28, 2019

Activities

Metrics Definition

Update the following metrics configuration:

1. You want the tolerance % for all volume metrics to be 10%
2. You do not want users to see the Patient Days (Adjusted) metric

****What needs to happen for these changes to display in application?*

Efficiency Factor

Scenario: You want to create an initiative to cut your medical supplies by 5% for the 310 - Bakersfield North entity starting in January.

Configure this efficiency factor.

Important Note: Please do not process MR data during class; after class is fine.

Drivers

You need fluctuations in your primary statistics for staffing (by month) to drive the productive and paid hours monthly target.

All non-productive and productive pay code groups for all job codes should be impacted.

Set this up in your database.
